

Lithuania's Report

Giedre Krinicina, Lietuvos Energija

Ruta Jarasuniene, Radioactive Waste Management Agency

Accepted site for near surface repository

The site for disposal of short-lived low- and intermediate-level radioactive waste has been confirmed at Stabatiškė in Visaginas Municipality, in the vicinity of the Ignalina NPP. The decision was taken by the Lithuanian Government, dated November 21, 2007.

Site of near surface repository

Ignalina NPP and the near surface repository site is close to the border of Latvia and Belarus.

● **Stabatiškė**, the site of repository for short-lived low- and intermediate-level radioactive waste

Public relations and information activities (1)

A workshop for Lithuanian journalists was arranged on December 21. Preparations for radioactive waste disposal and the process of site selection for the near-surface repository for short-lived radioactive waste repository were discussed at the event.

Public relations and information activities (2)

On December 22, a workshop was held for representatives of Latvian and Belarusian media and embassies about preparations for radioactive waste disposal in Lithuania and site selection for a near-surface repository.
